New Inventory Control Enhancement

Enhance your stock control efficiency with NICE's flexible and user-friendly low-code application

www.id.dentsusoken.com/nice

NICE is a **low-code application** designed to streamline **inventory management** by monitoring stock movements and warehouse activity, providing users with **real-time** insights and **accessible** data from **any device**.

CORE FEATURES NICE

Real-Time Monitoring:

Track stock movement and inventory updates instantly.

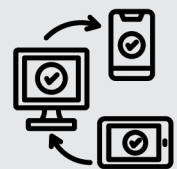

Access Anywhere:

NICE is cloud-based, allowing inventory data to be accessed from mobile devices or desktops.

Seamless ERP Integration:

NICE can connect with ERP systems and other warehouse software through APIs, enabling smooth data transfers.

Multi-Platform Support:

Available on web, mobile, and hybrid platforms for a consistent user experience.

Advantages of Low-Code Development

Developing applications with Mendix enables quick implementation and collaboration between technical and business teams, creating solutions tailored to operational needs.

- **Visual Interface:** Drag-and-drop and model-driven interface makes building applications easy without complex coding.
- **Rapid Prototyping:** Ideal for quick development and iteration, allowing businesses to respond efficiently to changes.

Security and Flexibility NICE

High-Level Security and Compliance

- NICE is equipped with industry-standard security features (ISO 27001, ISO 27017) and audit trails to protect data privacy and prevent security threats.
- Disaster Recovery: NICE offers reliable data recovery with regular backups and automatic disaster recovery systems.

Flexible Deployment

- NICE supports deployment on public or private cloud and on-premises according to business needs.
- The cloud-based infrastructure offers up to 99.95% uptime, ensuring data is always available and secure.

Use Cases

- Manufacturing: Implementing NICE for streamlined asset and inventory tracking.
- Supply Chain Management: Real-time visibility and control over stock levels, ensuring efficient operations.
